

Digital Learning Day -- February 22, 2018

Posted on 02/22/2018

The annual Digital Learning Day, started in 2012, gives educators an opportunity to collaborate with peers, share ideas, and try out new digital tools. The grassroots effort blossomed into a massive nationwide celebration as teachers realized that Digital Learning Day is not about technology, it's about learning.

Digital learning is any instructional practice that effectively uses technology to strengthen a student's learning experience. It emphasizes high-quality instruction and provides access to challenging content, feedback through formative assessment, opportunities for learning anytime and anywhere, and individualized instruction to ensure all students reach their full potential to succeed in college and a career.

Digital learning encompasses many different facets, tools, and applications to support and empower teachers and students, including online courses, blended or hybrid learning, or digital content and resources. Additionally, digital learning can be used for professional learning opportunities for teachers and to provide personalized learning experiences for students.

Digital learning increases equity and access to educational opportunities, improving effectiveness and productivity of teachers and administrators, providing student-centered learning to ensure college and career readiness for all students, and recognizing teachers as education designers.
